Don't put the value and productive operation of your equipment at risk! Rely on genuine ZF spare parts!

Genuine ZF parts keep your machines running.

The demands for high equipment availability, low operating costs and long service intervals have led to more stringent requirements on service parts in construction equipment.

Right from the start, the original equipment of ZF transmission and axle components with top-quality wear parts ensures maximum mileage and reliable operation of your machines. Servicing your equipment with genuine spare parts from ZF is your best guarantee for maintaining the original vehicle performance. Only genuine parts are perfectly matched to the particular vehicle requirements and features. They were developed along with the ZF vehicle components to ensure optimum interaction.

ZF and its production partners are heavily investing in research & development, manufacture and quality control of their spare parts to make them fully meet these high technical demands, including vehicle-specific characteristics, warranty requirements and safety standards.

Genuine ZF parts are your safest way of avoiding time-consuming and expensive downtime and achieving outstanding operating economy.

**NEW FILTER GENERATION:**  
ZF HIGH PERFORMANCE FILTERS  
WITH EXTENDED SERVICE INTERVAL

Reliable quality parts require a great deal of know-how and high levels of investment that cannot be matched by low-cost suppliers.

One who decides to use what are supposedly cheaper imitations, when selecting spare parts for expensive machines, will make no savings in the long run.

Genuine ZF oil filters, in different sizes, can be purchased from authorized service dealers worldwide within shortest time.

Only ZF quality filters guarantee the performance you are expecting!

Construction machines call for extreme engine and transmission efficiency. Clean oil is a prerequisite for optimum performance characteristics. Genuine ZF high performance filters fully come up to all these requirements and assure quality operation of your equipment.

Only genuine ZF filters offer you the following advantages:

- Optimum tuning to the transmission
- Pressure-resistant and corrosion-protected housing
- Long-life, mixed-fiber filter medium with large filter surface thru optimum pleating geometry
- High separation rate by  $\mu\text{m}$  filter mesh
- Low flow resistance
- High dirt absorption and maximum filter service life
- Long-life seal ring
- High-quality silicone non-return valve
- Teflon-coated bypass valve
- Functional guarantee throughout the whole service interval, even under extreme conditions
- Quick filter change by releasing devices
- Top-quality individual components and workmanship
- Consistent quality controls during production

Genuine ZF oil filters  
– Details are the quality!

Copy parts jeopardize the operational efficiency of your machines.

First impressions can be deceiving: It's often impossible to distinguish counterfeit parts from the originals. Packaging is copied; even trade names and part numbers are falsified. The big differences are in the details: examples being improper workmanship, low-grade materials or poor design, e.g. by part reduction.

Use of non-ZF products often causes loss of machine efficiency, reliability and safety, resulting in shorter service intervals, accumulated failures and even the risk of costly engine and transmission damage.

Insist on getting genuine spare parts from authorized service dealers for the maintenance of your machines.
