

ZF in Grader

Graders must adapt to the most varied ground conditions quickly and impressively. Optimum weight distribution for achieving maximum tractive effort is one of the primary requirements. To master difficult conditions in the working routine, smooth movements in conjunction with a high pulling power are decisive for excellent working performance and for overcoming high material resistances.

ERGOPOWER

- 6 forward/4 reverse gears
- Lock up clutch for direct drive available
- Applications up to 21 t
- Speeds up to 50 km/h

ZF Driveline Technology for Graders

Product and performance classes
