

Gearbox services powered by Vestas and ZF

ZF Wind Power (ZF) and Vestas Wind Systems A/S (Vestas) have entered into a gearbox service partnership, combining core competencies to offer unparalleled gearbox service solutions across turbine brands.

Shop repairs and replacement units

ZF offers pioneering technical knowhow of gearbox design, downtower reparations and worldwide repair centers in all key regions.

Uptower Repairs

Vestas adds operating, running and servicing experience to turbines of all brands in the field. An extraordinary large pool of more than 8000 qualified Vestas' service technicians with local presence in all relevant countries worldwide will intervene for uptower gearbox repairs.

ZF puts wind energy in motion

With this service partnership, ZF and Vestas combine over 80 years of joint gearbox repair experience and over 140 GW of worldwide installed gearbox rated output power capacity.

Key strengths of both partners will minimize costs and reduce downtime, which enables ZF and Vestas to develop new, industry-innovative value propositions.

.....

Thanks to optimized gearbox maintenance, customers will benefit from:

- Turnkey service solutions from a single point of contact, including root cause analysis, inspections, maintenance, repair, spare parts, replacement and crane solutions for onshore and offshore interventions
 - Five years extended warranty options for selected gearbox types
 - Even more competitive pricing for shop repairs and uptower interventions
 - Industry-leading local availability of gearboxes, genuine spare parts, tools, cranes and resources
 - Differentiated repair levels, taking the condition and remaining life-time of the gearbox into consideration
 - Gearbox SWAP models to increase turbine availability and reducing LCoE
